

Follow-up Availability Analysis

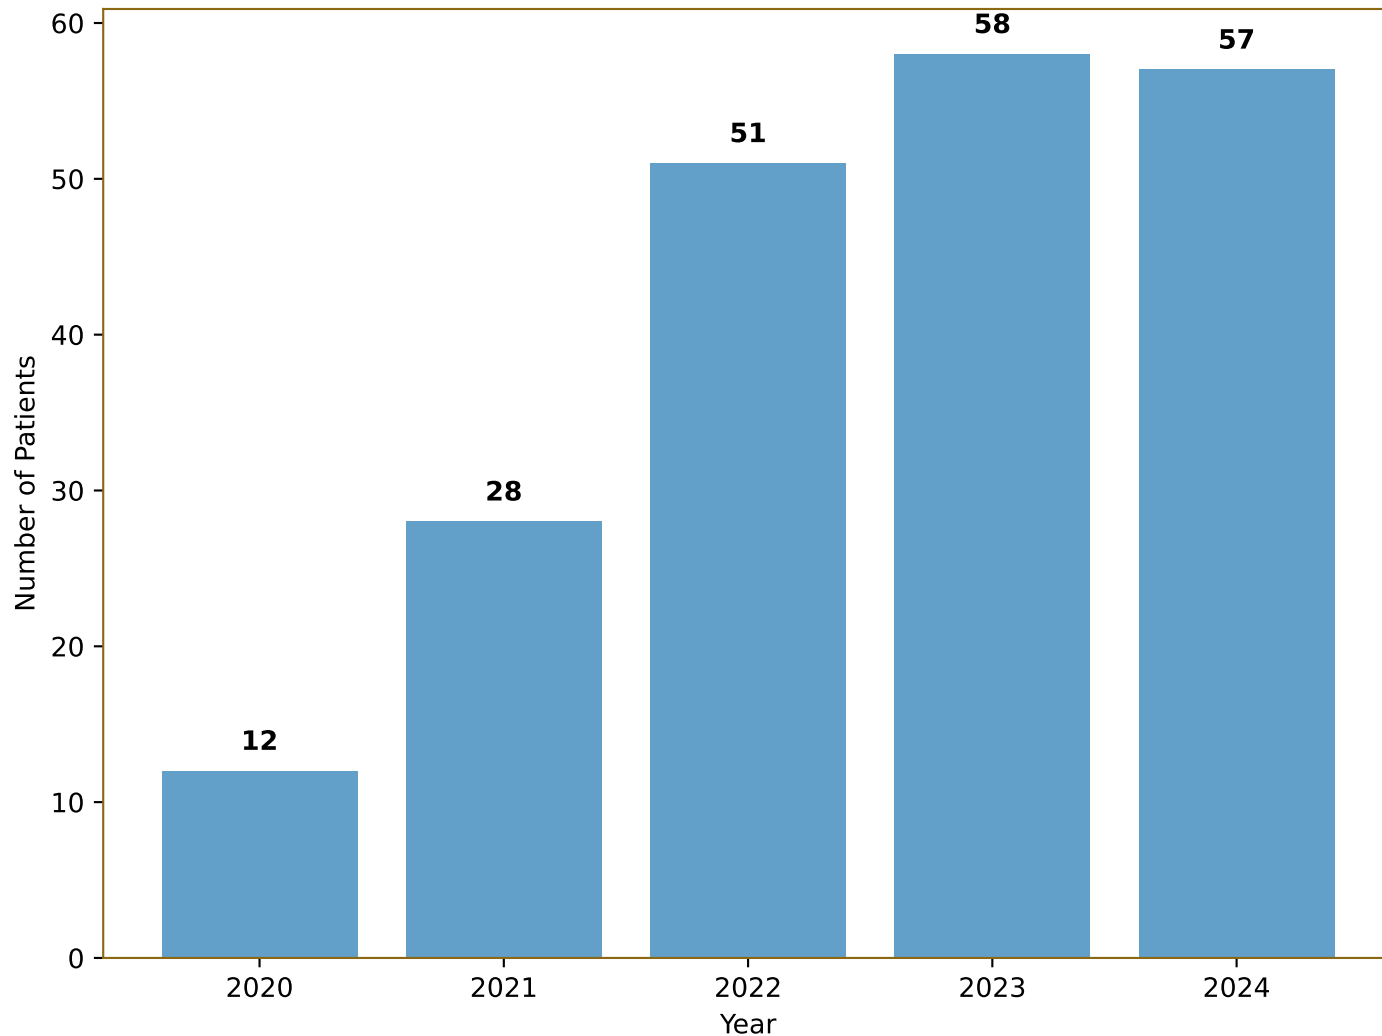

Temporal Distribution & Patient Follow-up Patterns

Years Analyzed: 2020, 2021, 2022, 2023, 2024

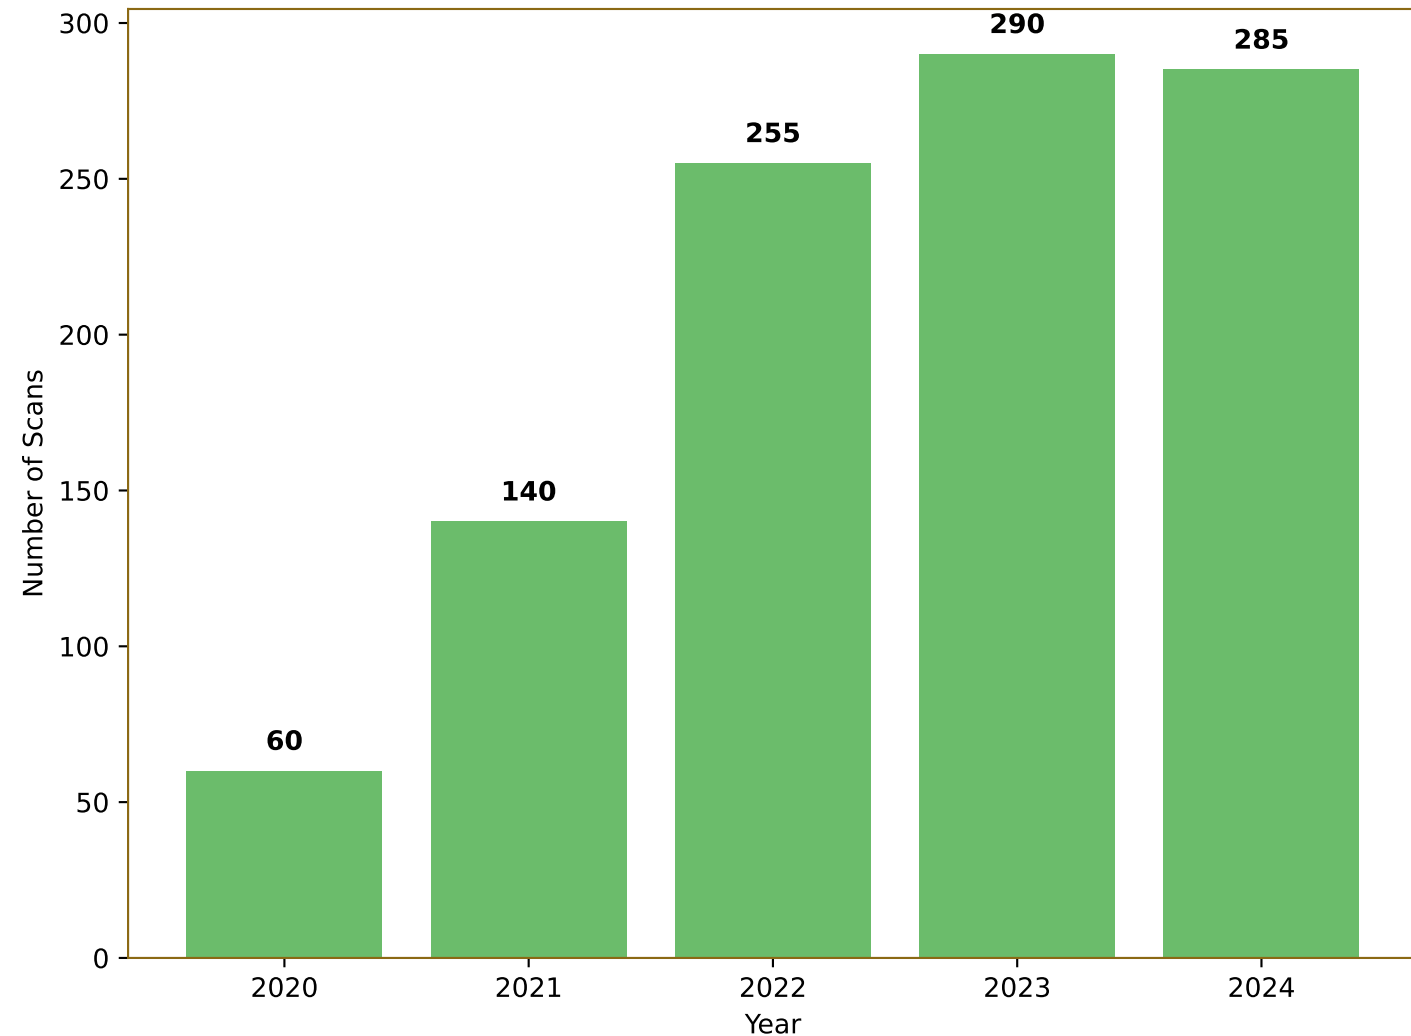

- Year-wise Patient Distribution
- Follow-up Availability Trends
- mRS Outcome Distribution
- Temporal Follow-up Patterns
- Data Quality Assessment
- Recommendations for Future Studies

Year-wise Follow-up Overview

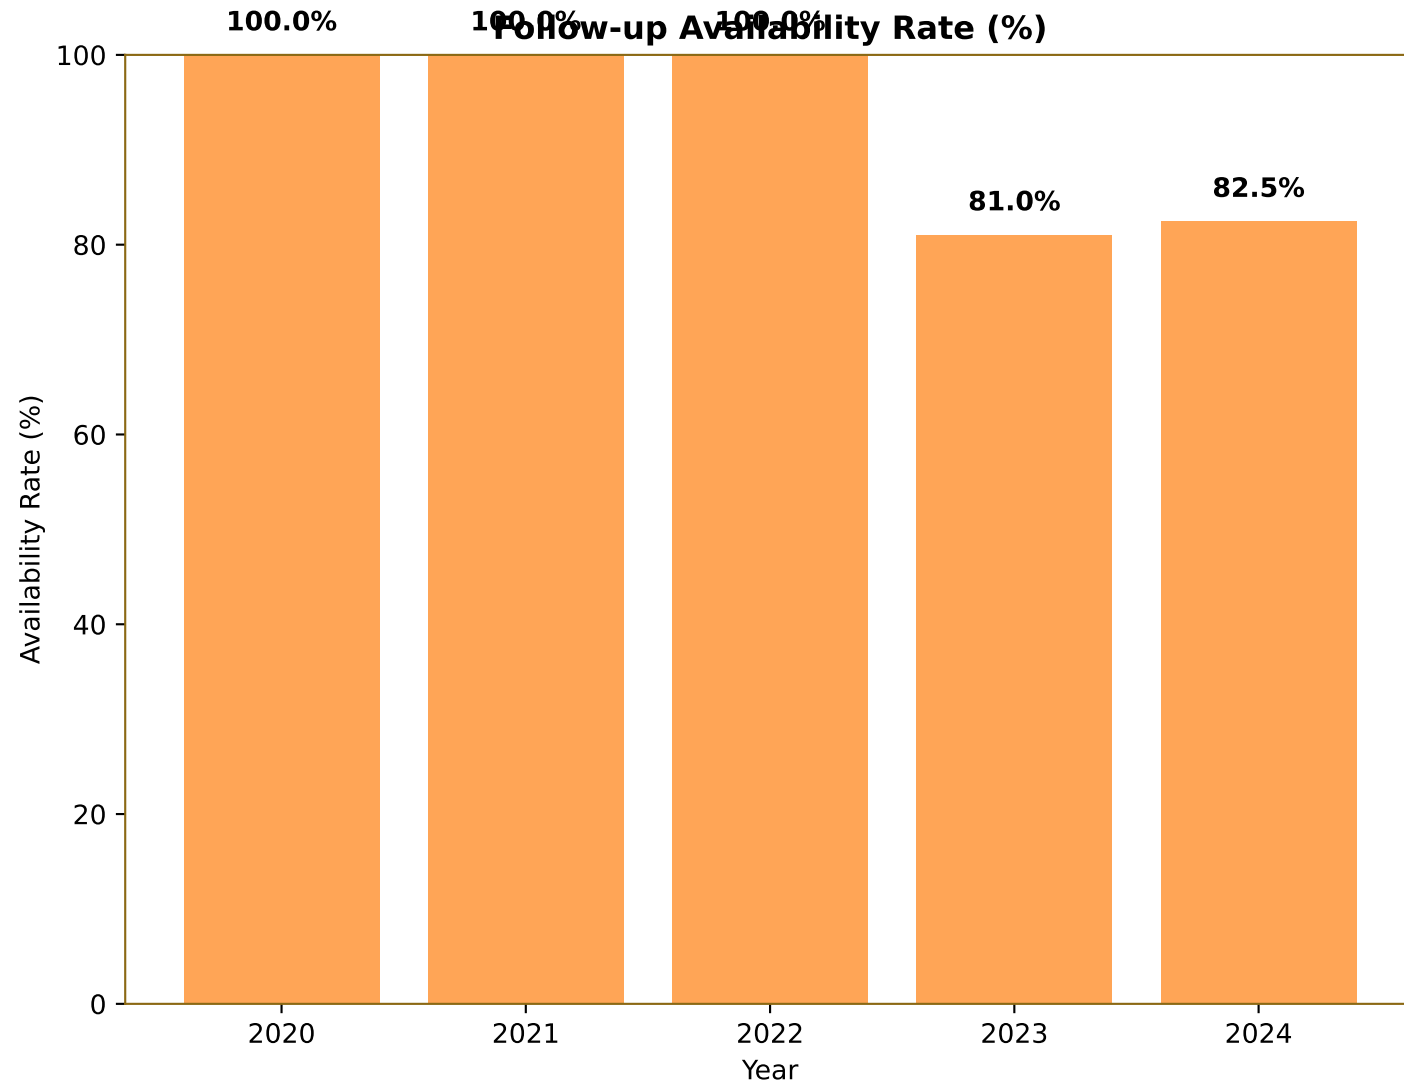

Unique Patients by Year

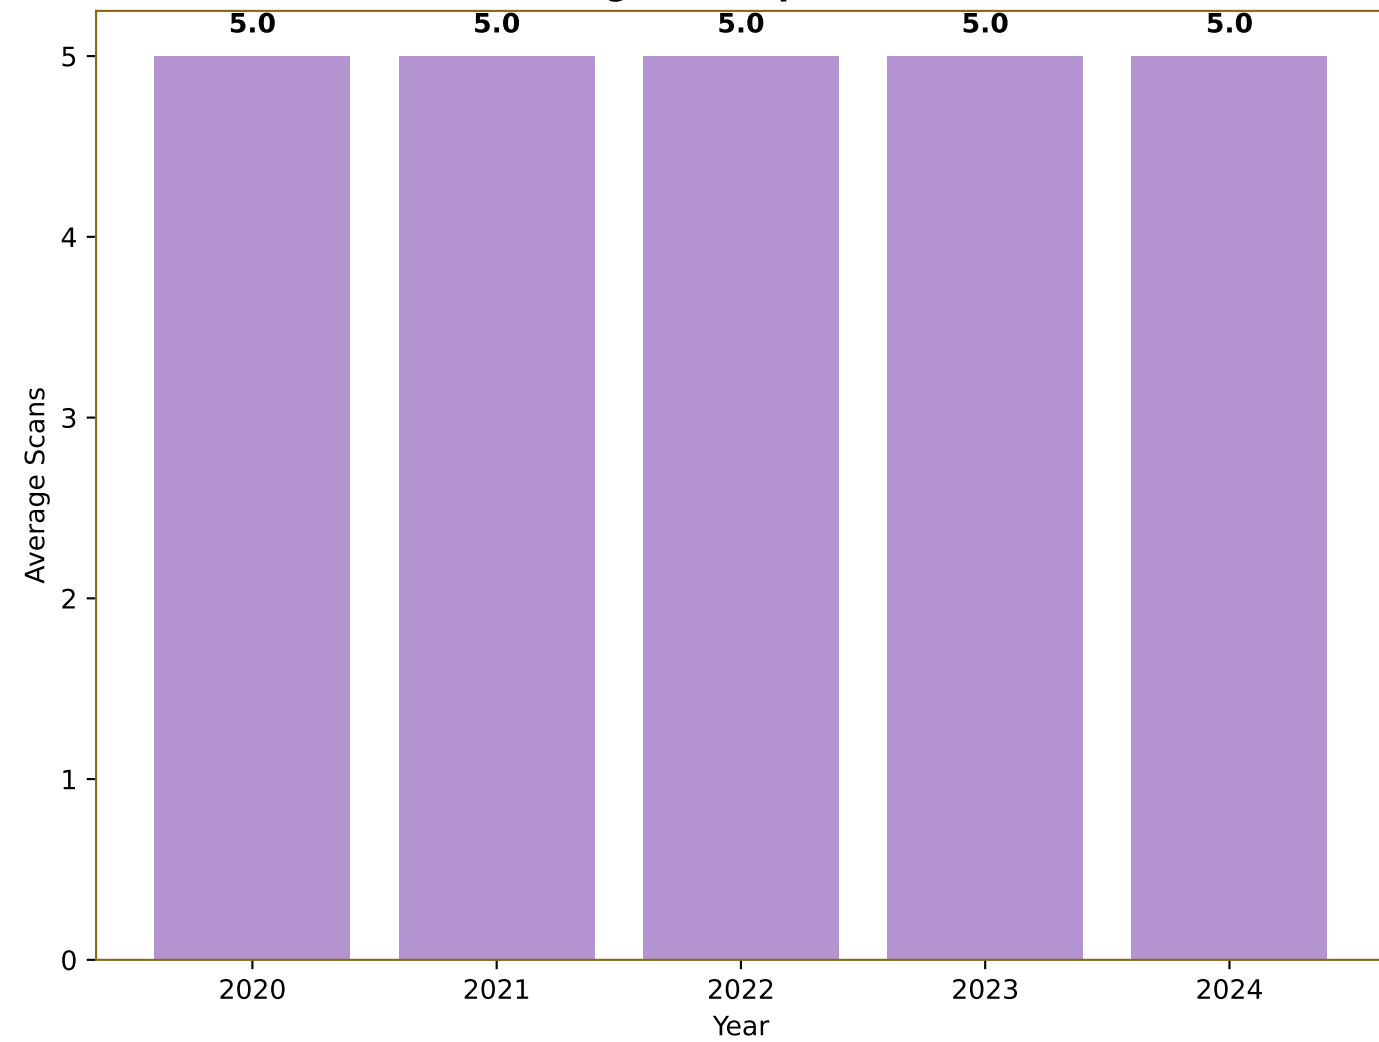

Total Scans by Year

Follow-up Availability Rate (%)

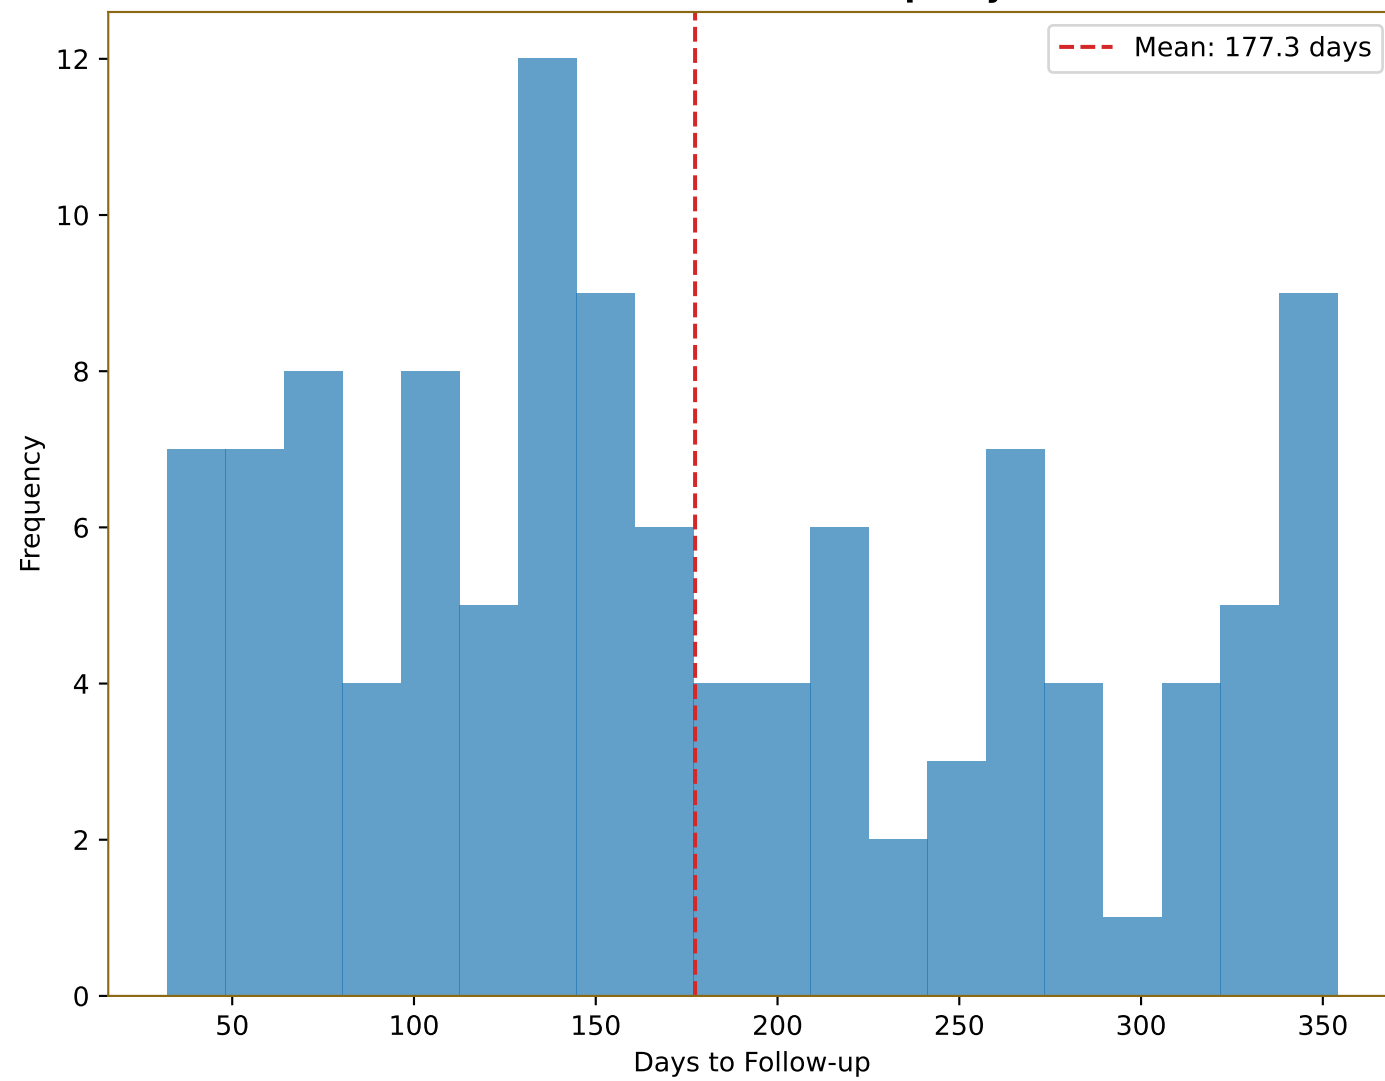

Average Scans per Patient

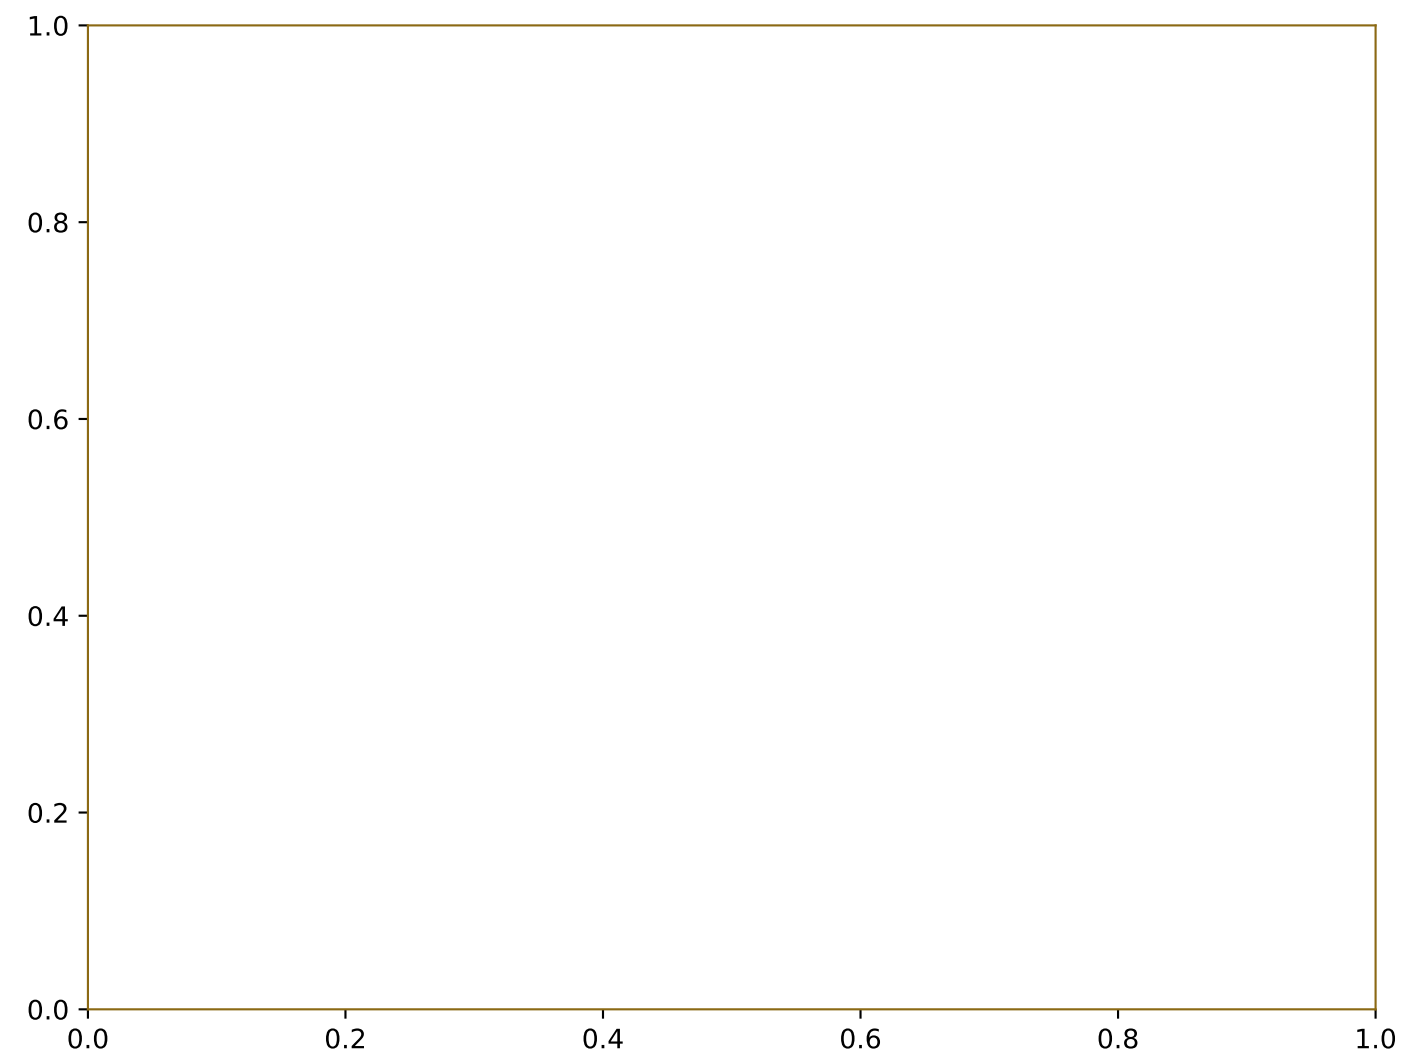

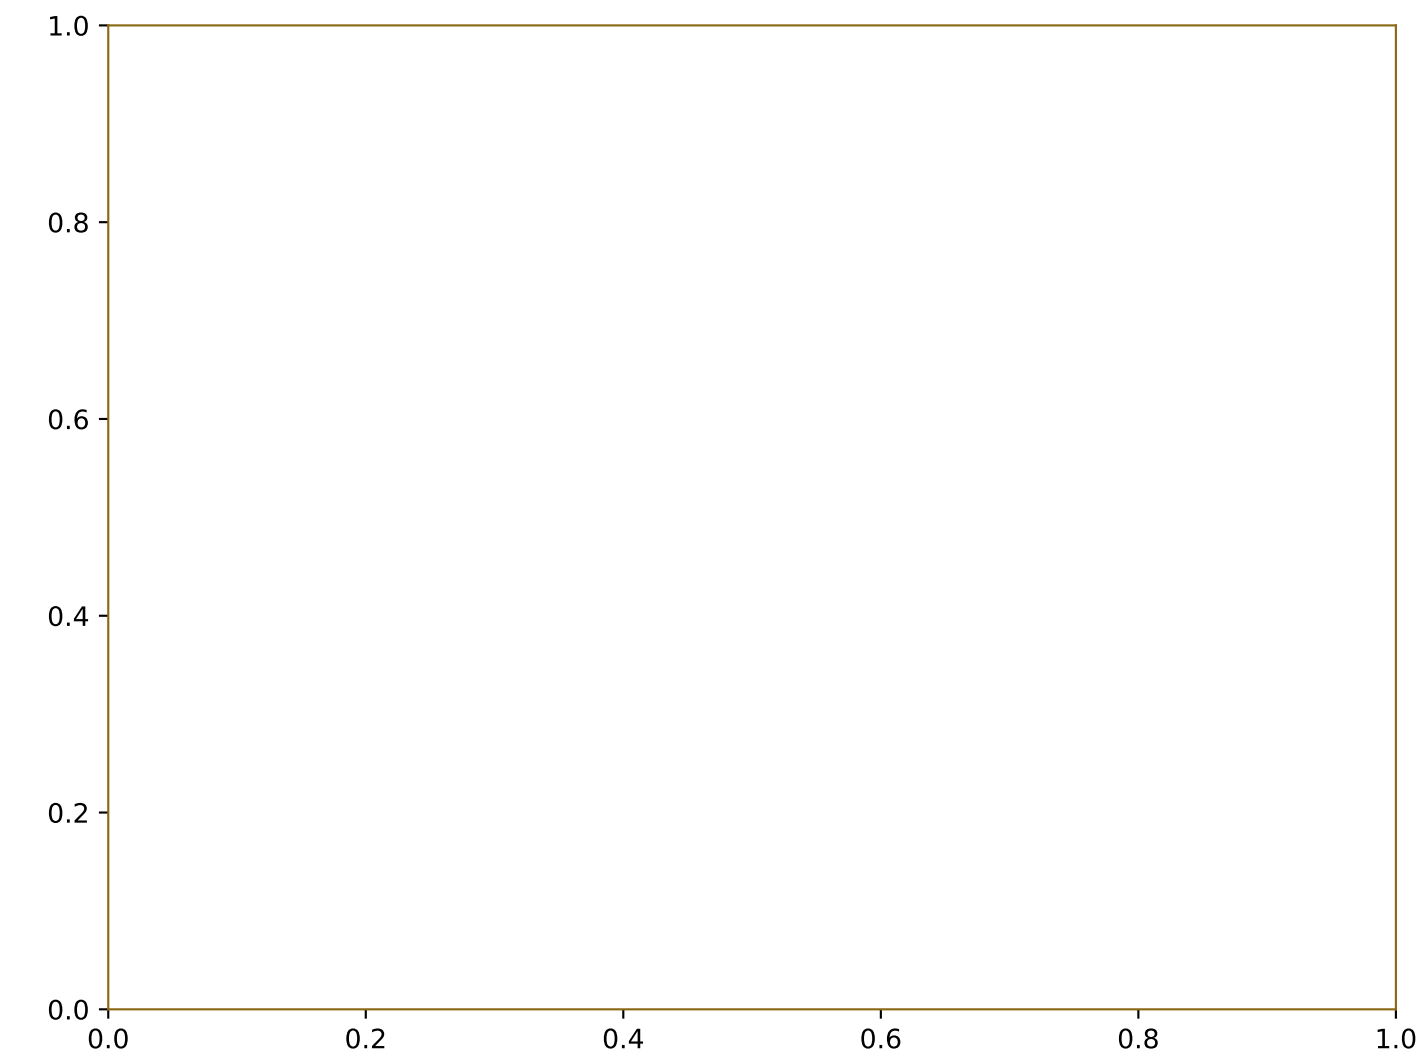

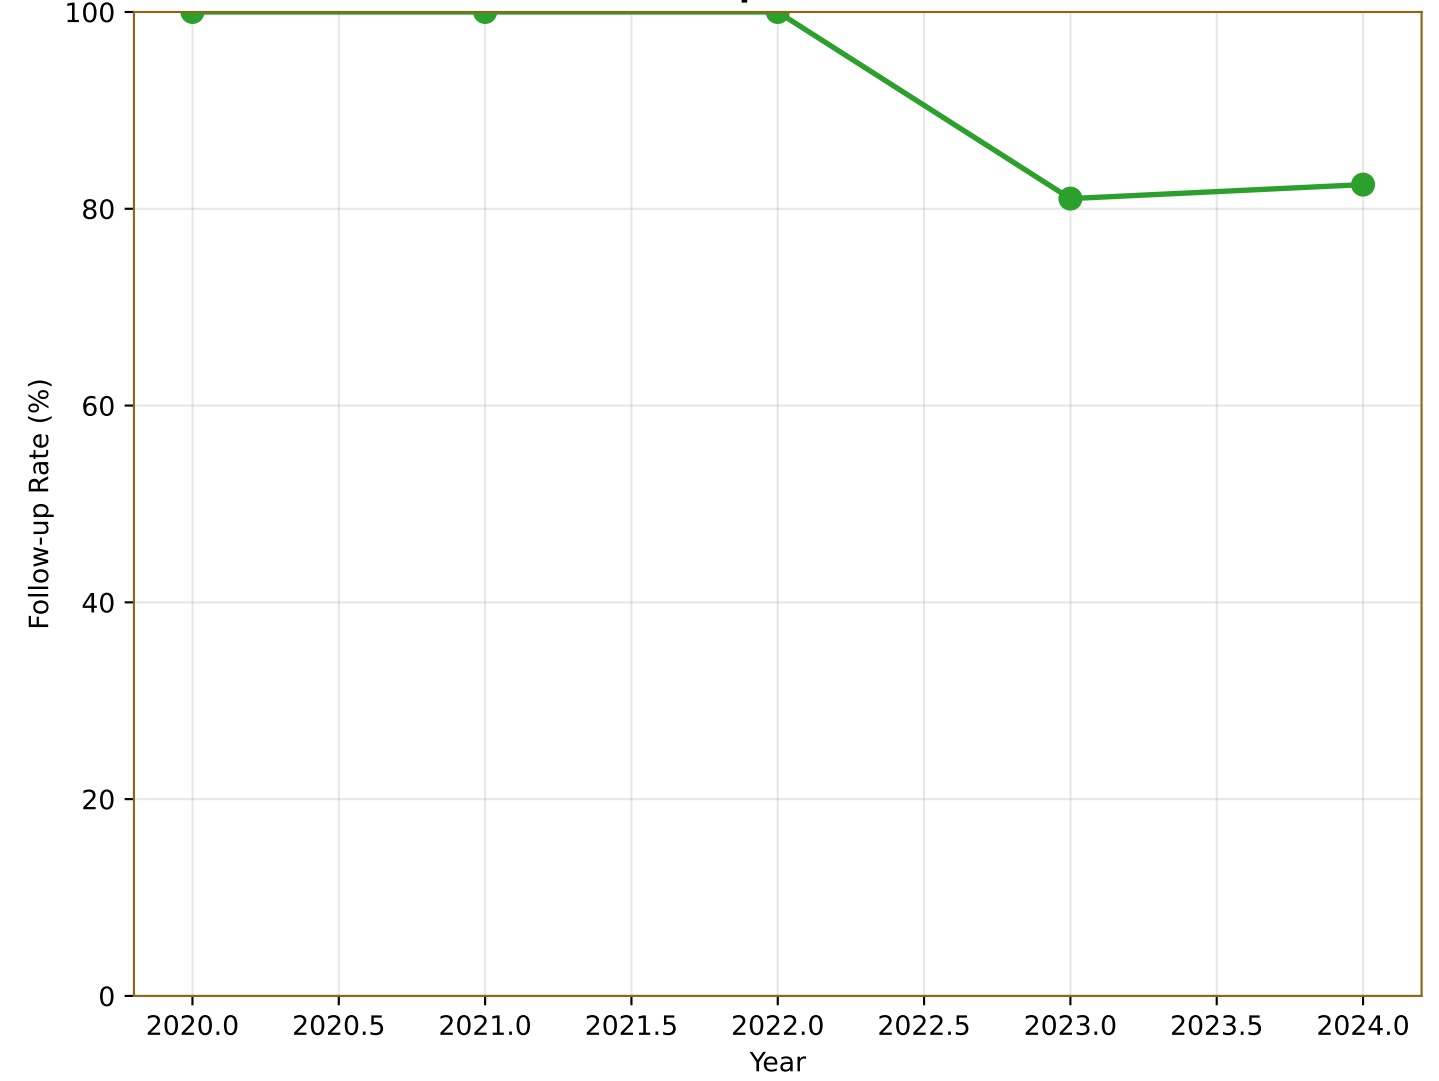

Follow-up Trends Analysis

Distribution of Follow-up Days

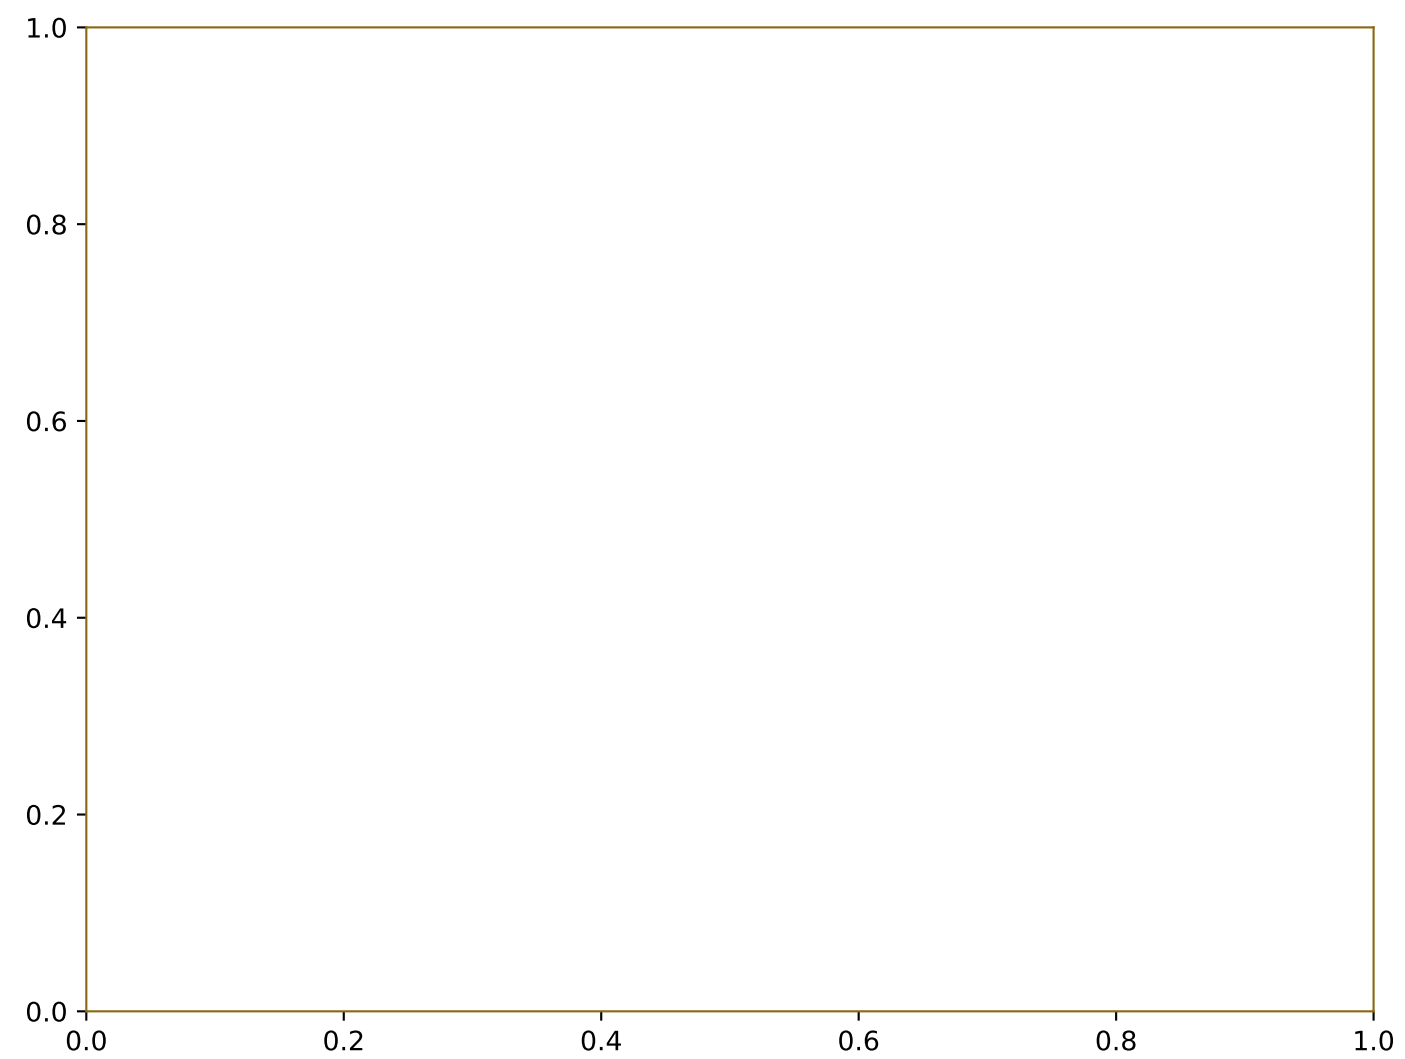

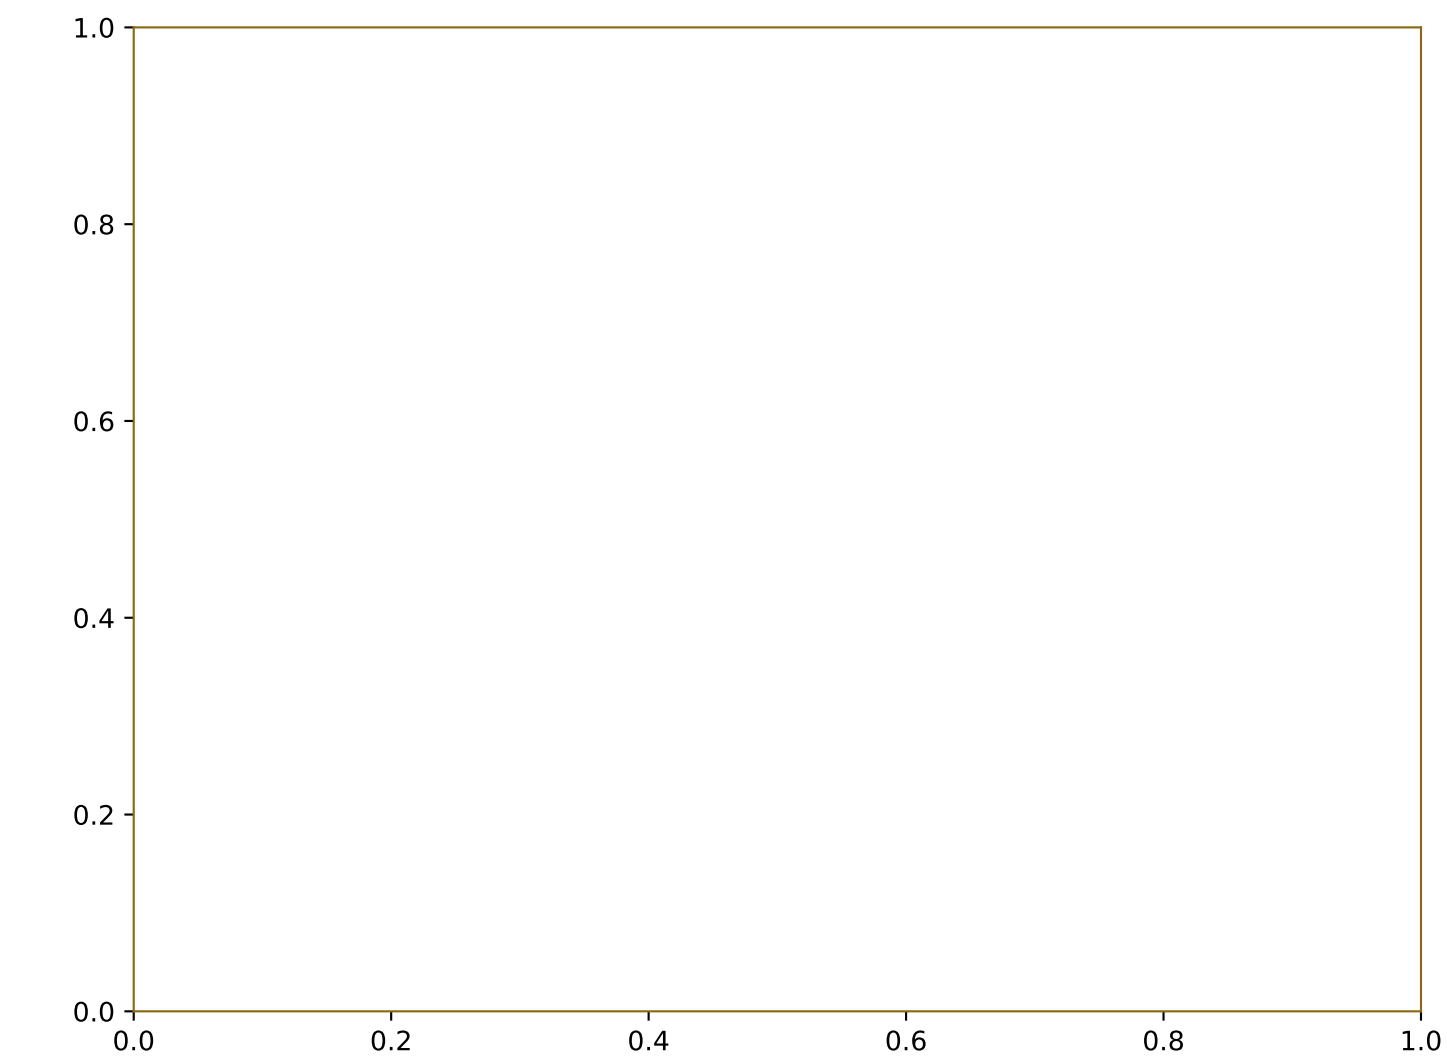

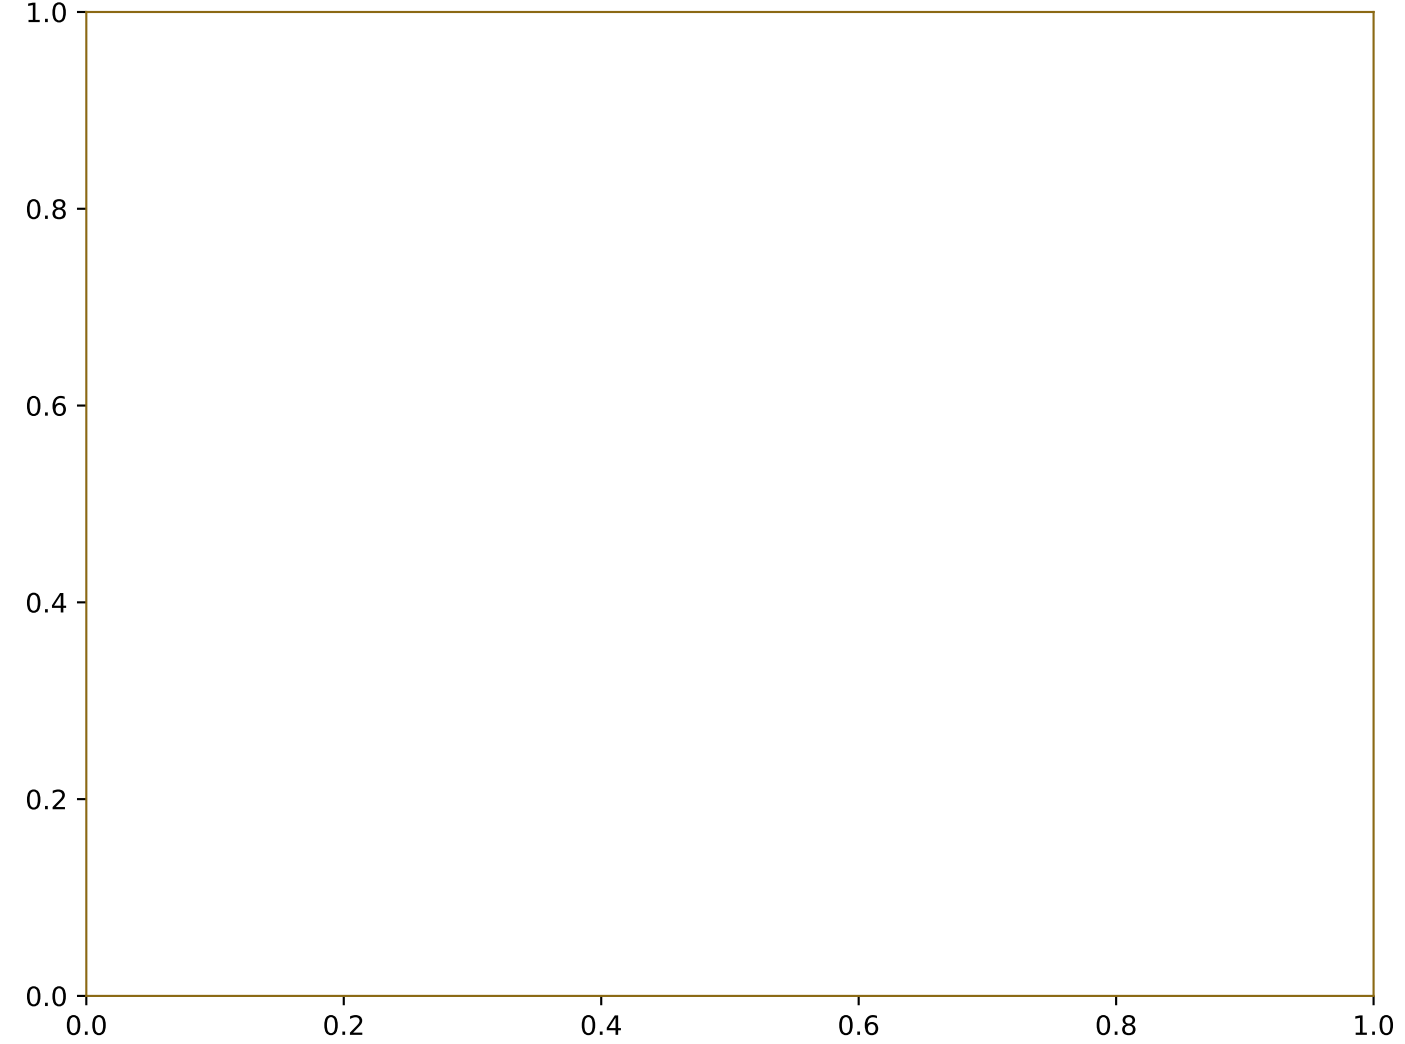

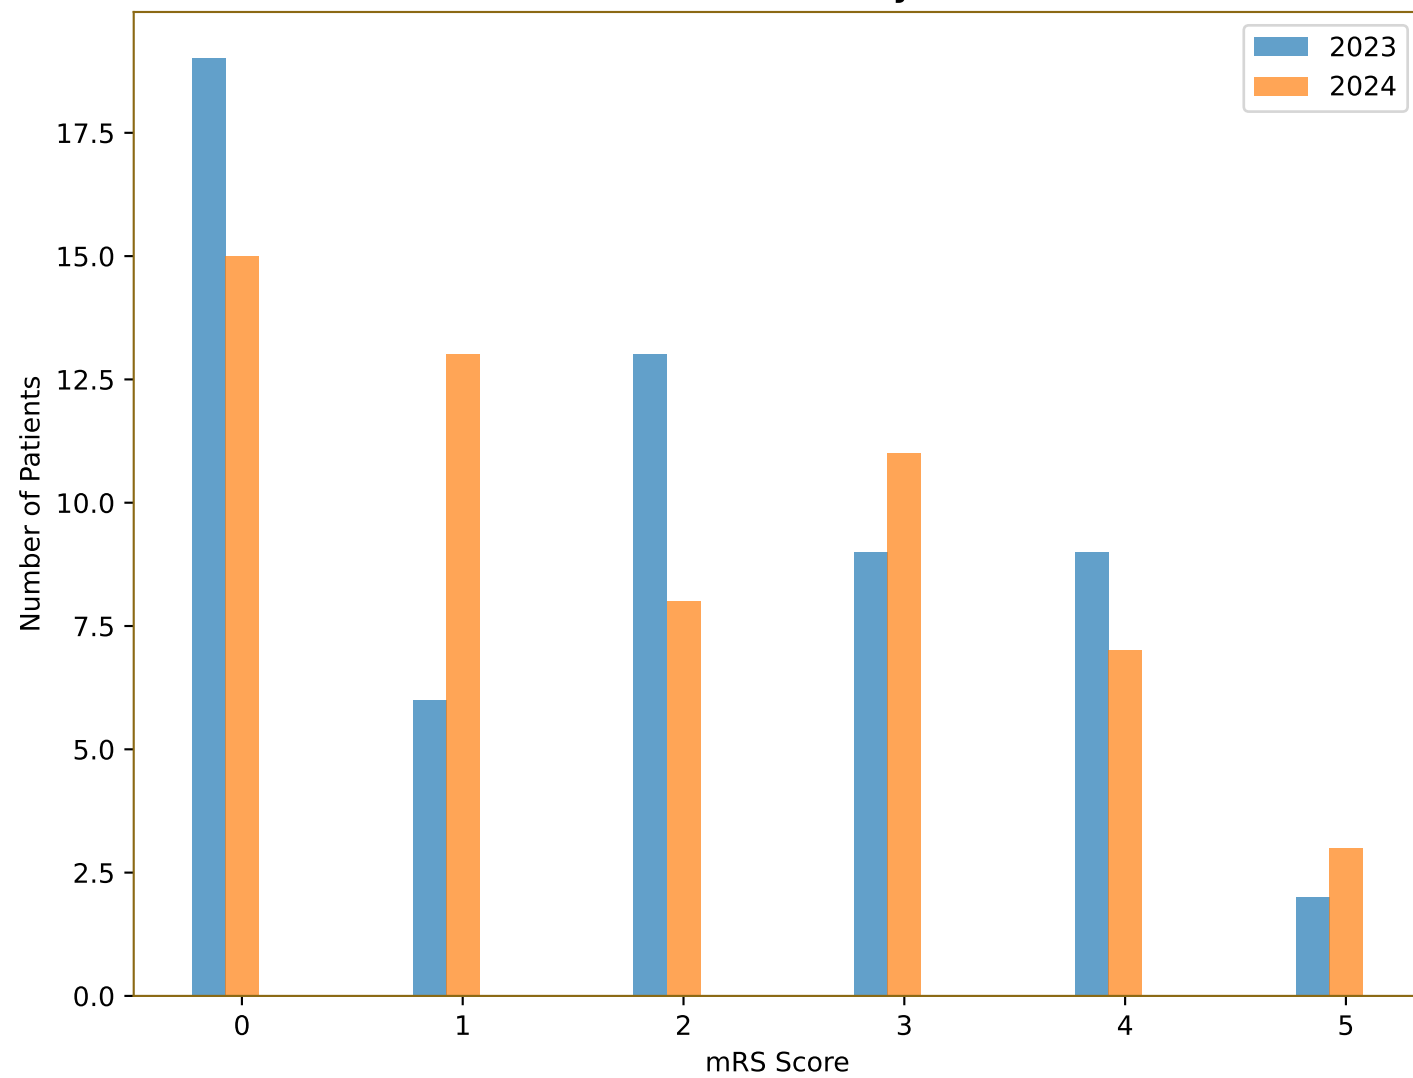

Follow-up Rate Trend

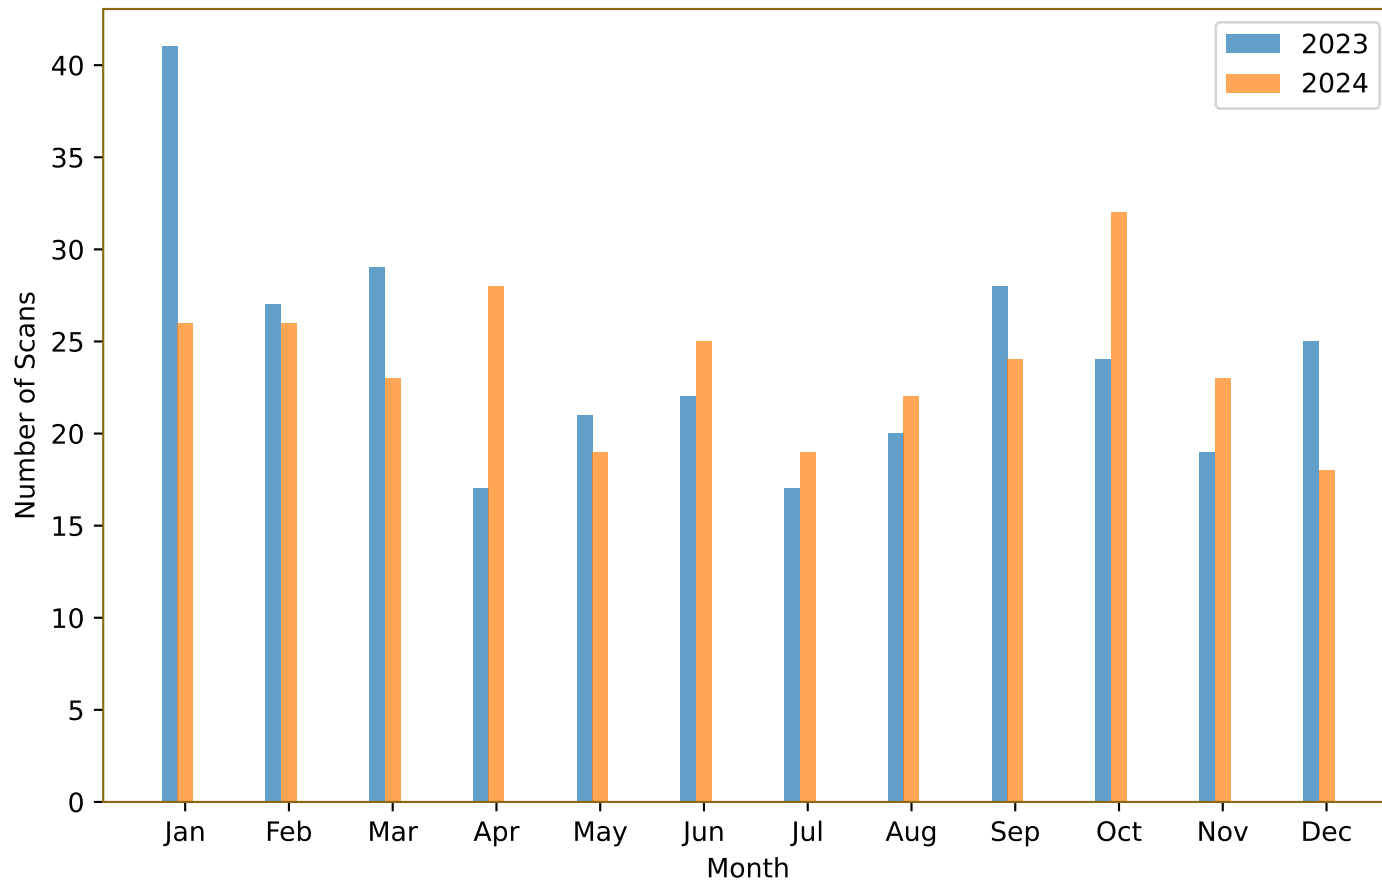

mRS Distribution Analysis

mRS Distribution by Year

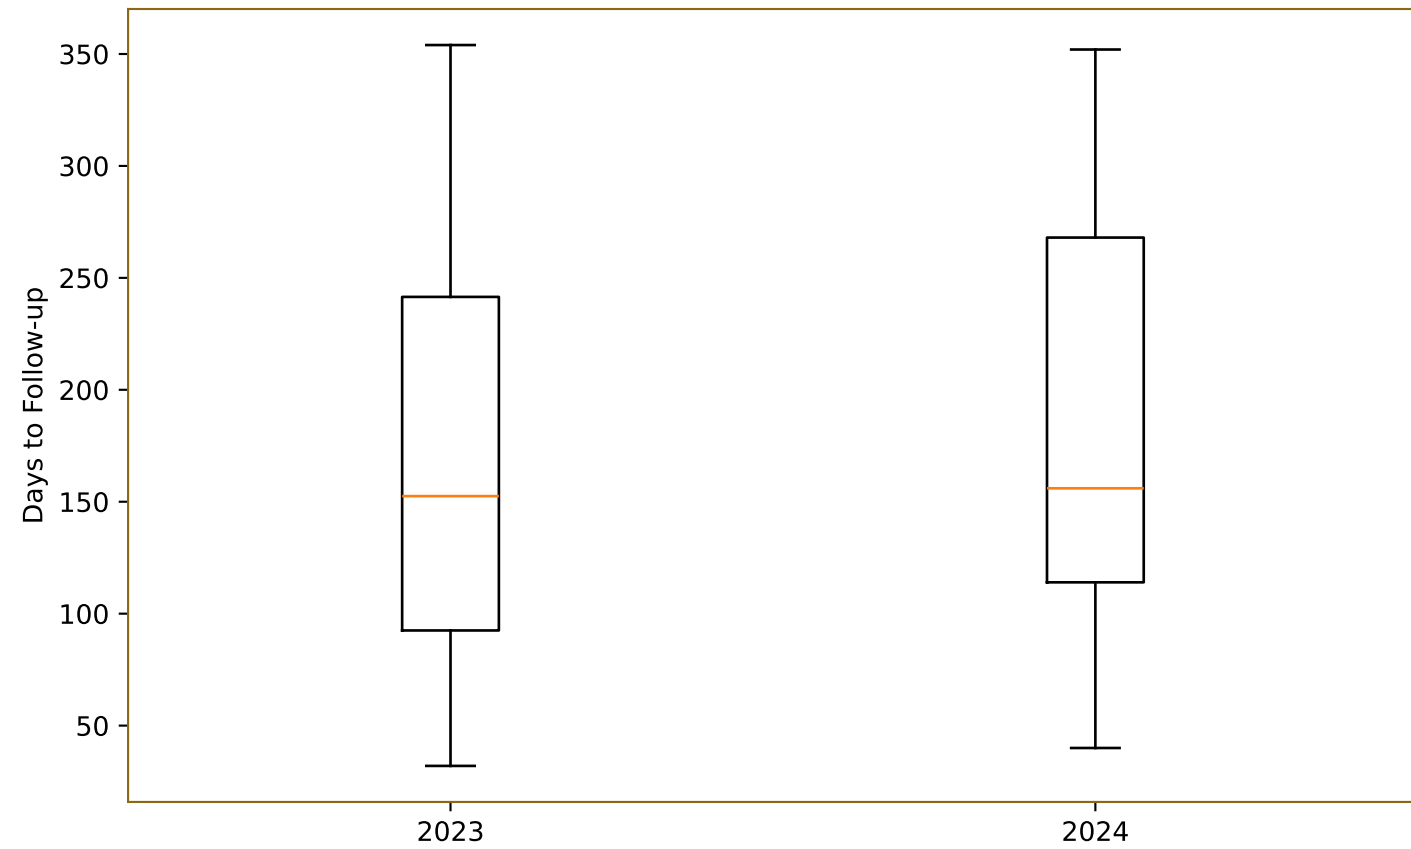

Temporal Follow-up Patterns

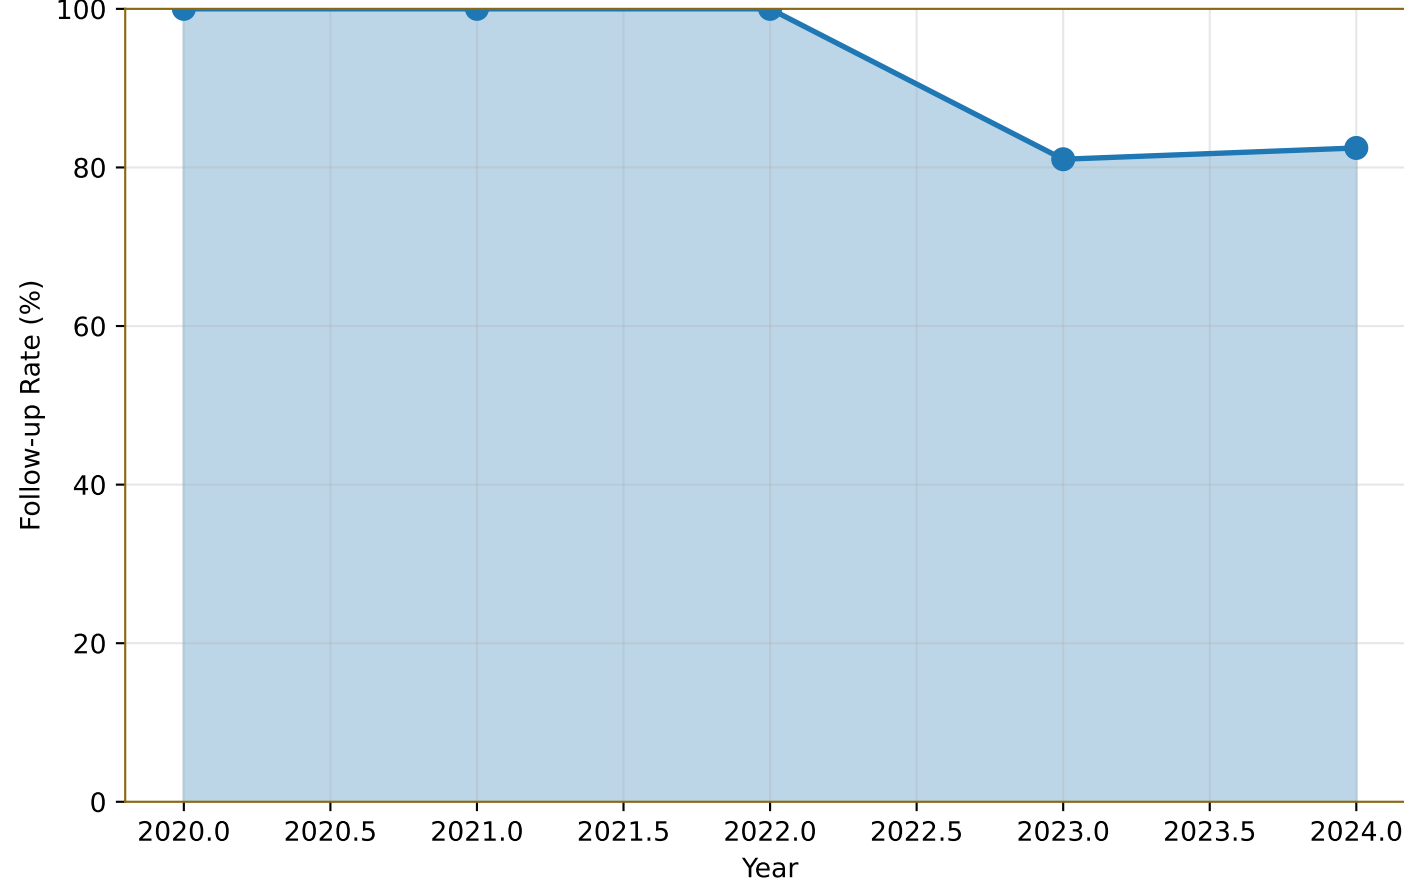

Monthly Scan Distribution

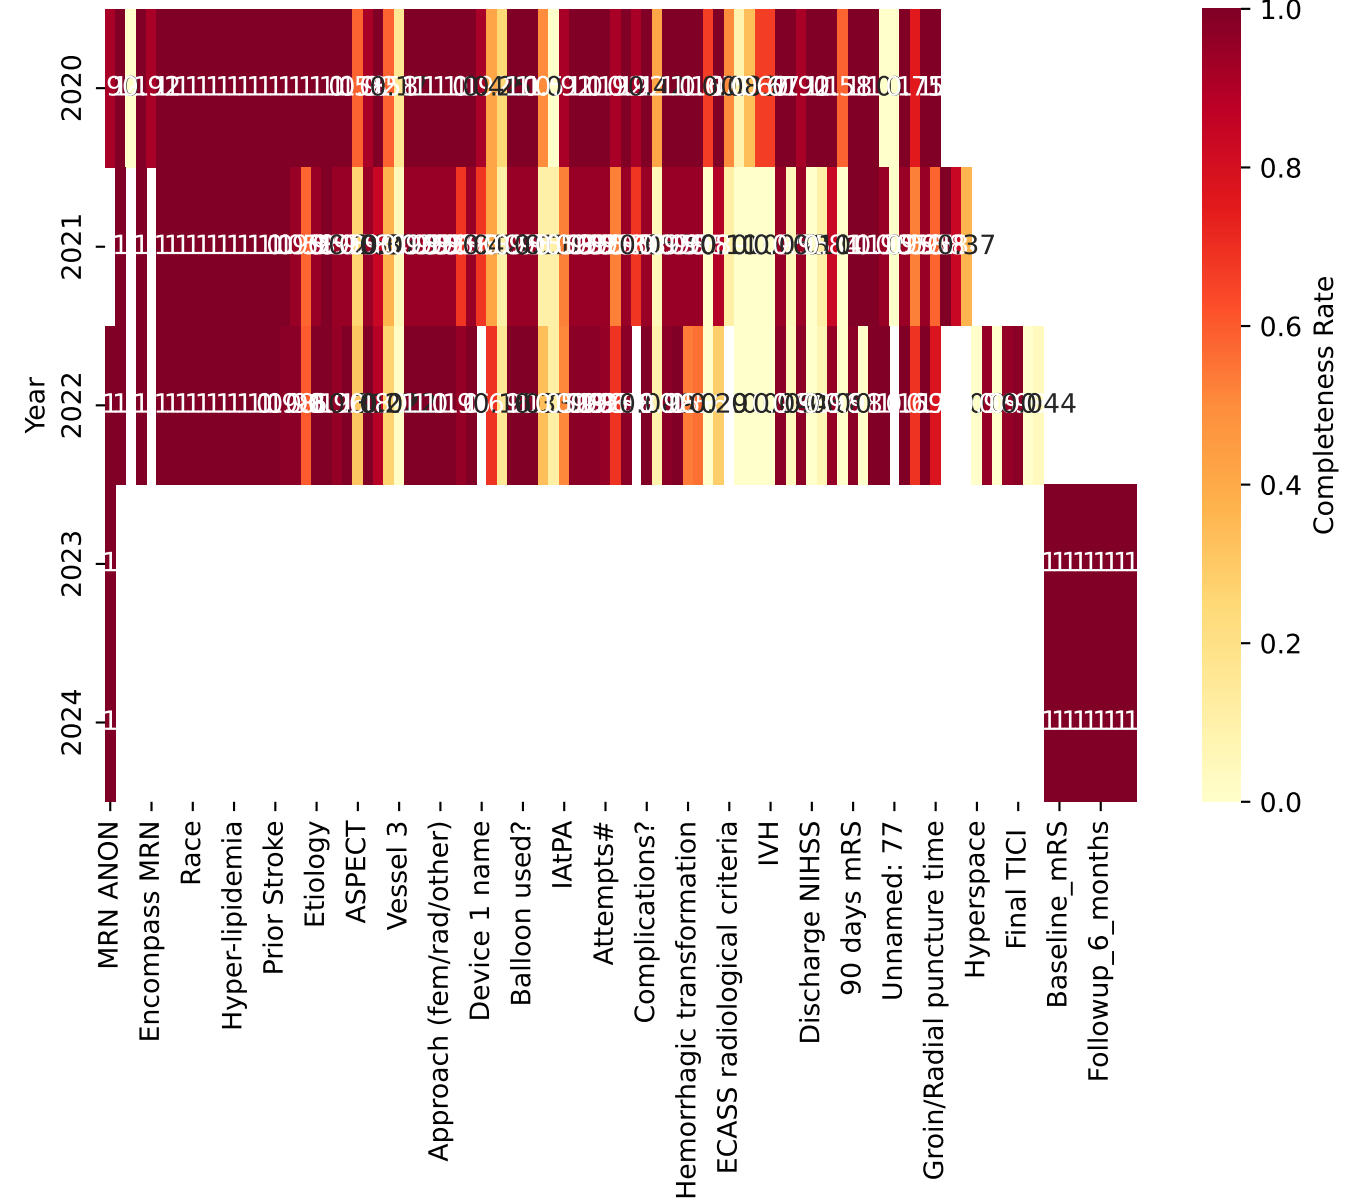

Follow-up Time Distribution by Year

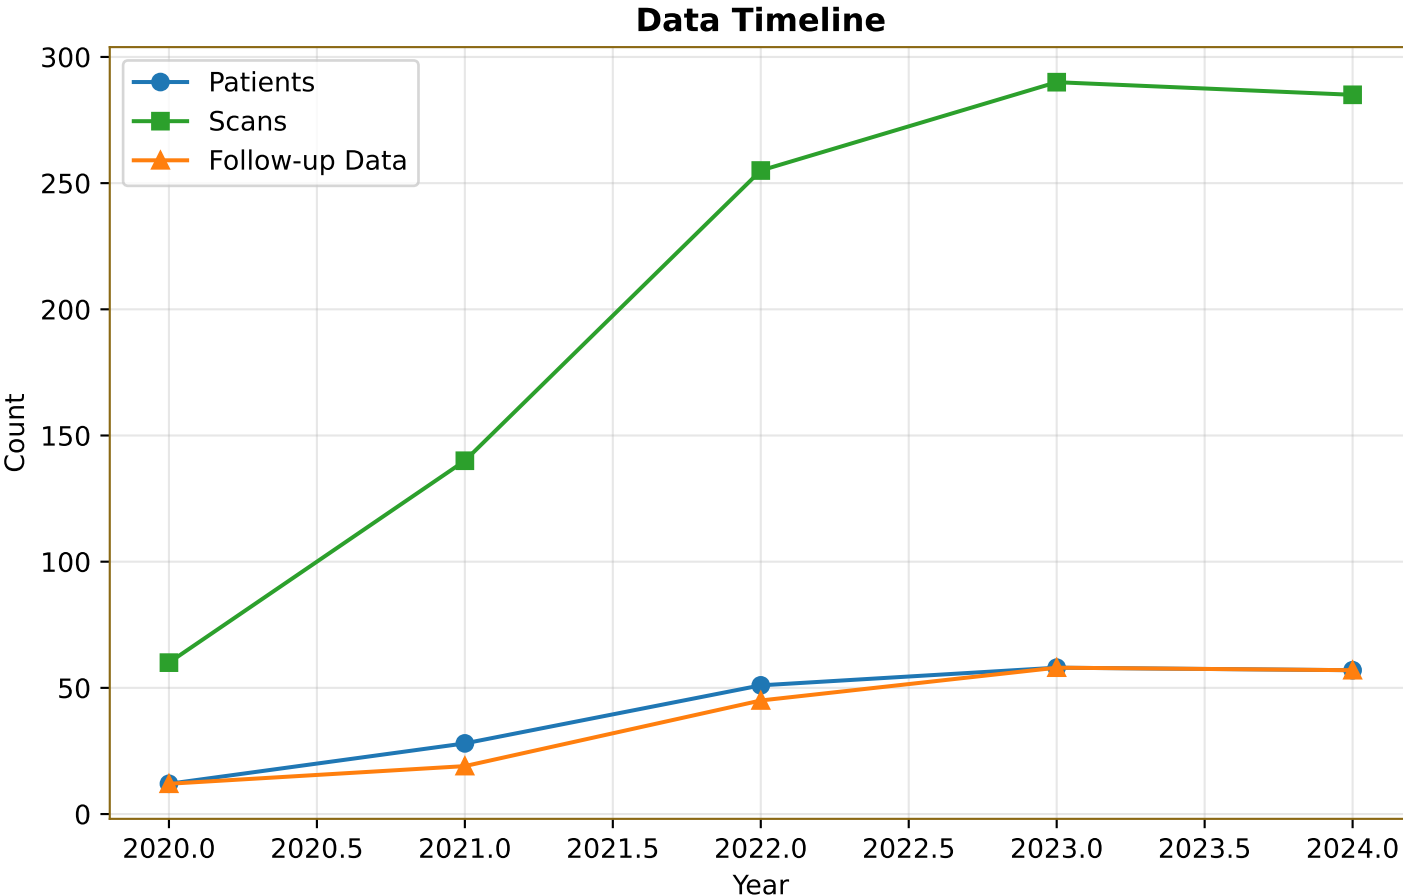

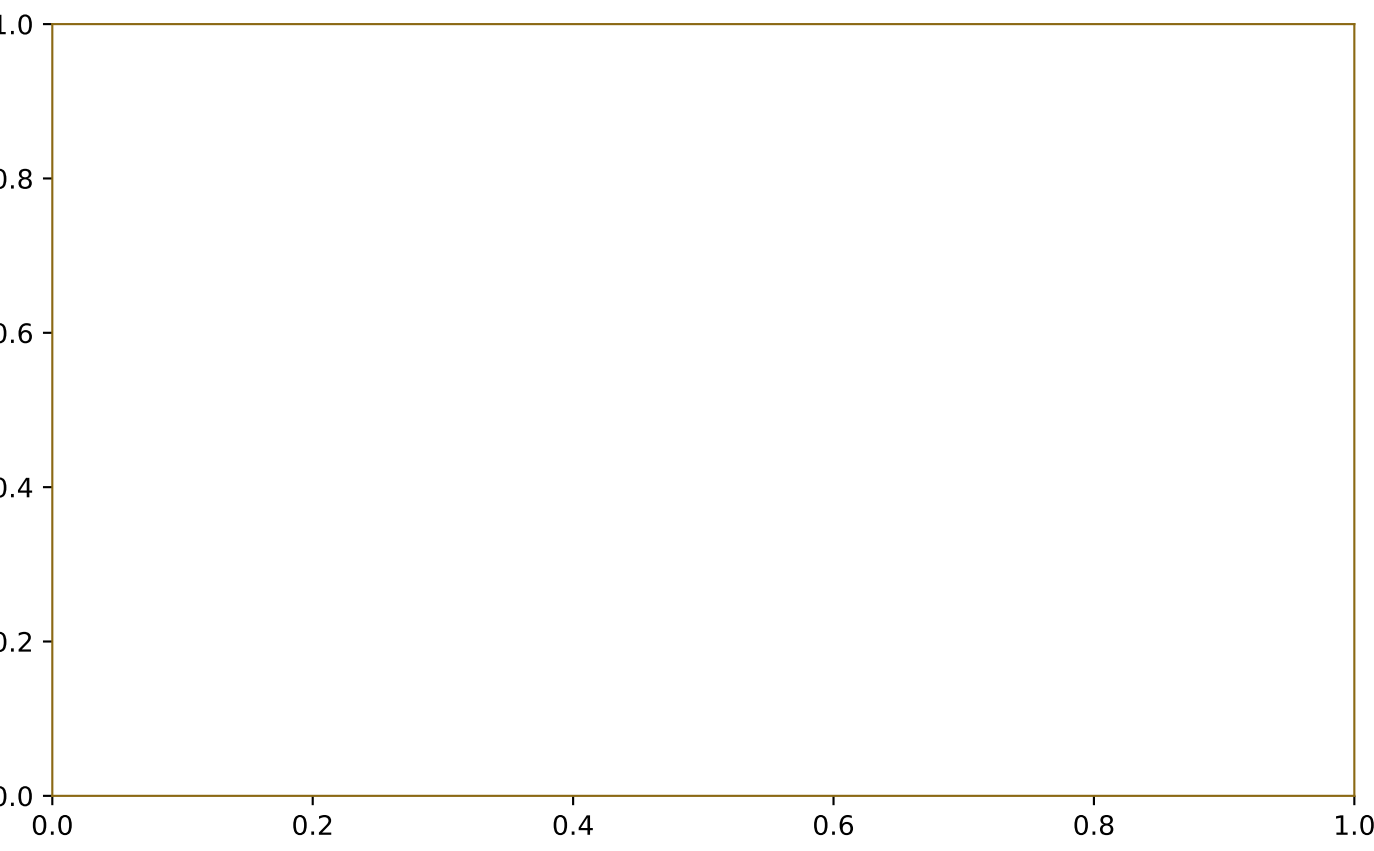

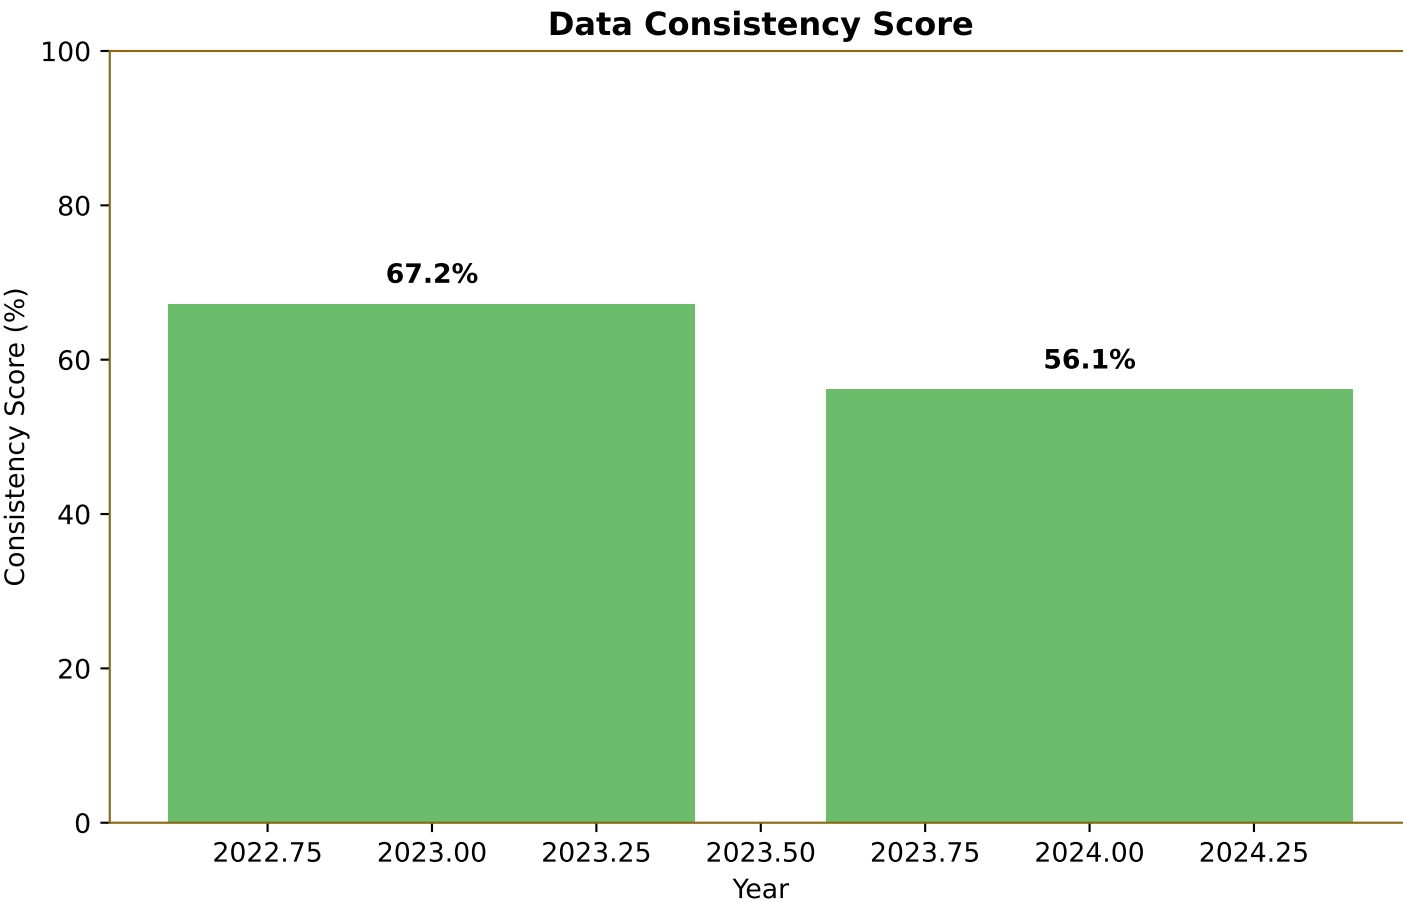

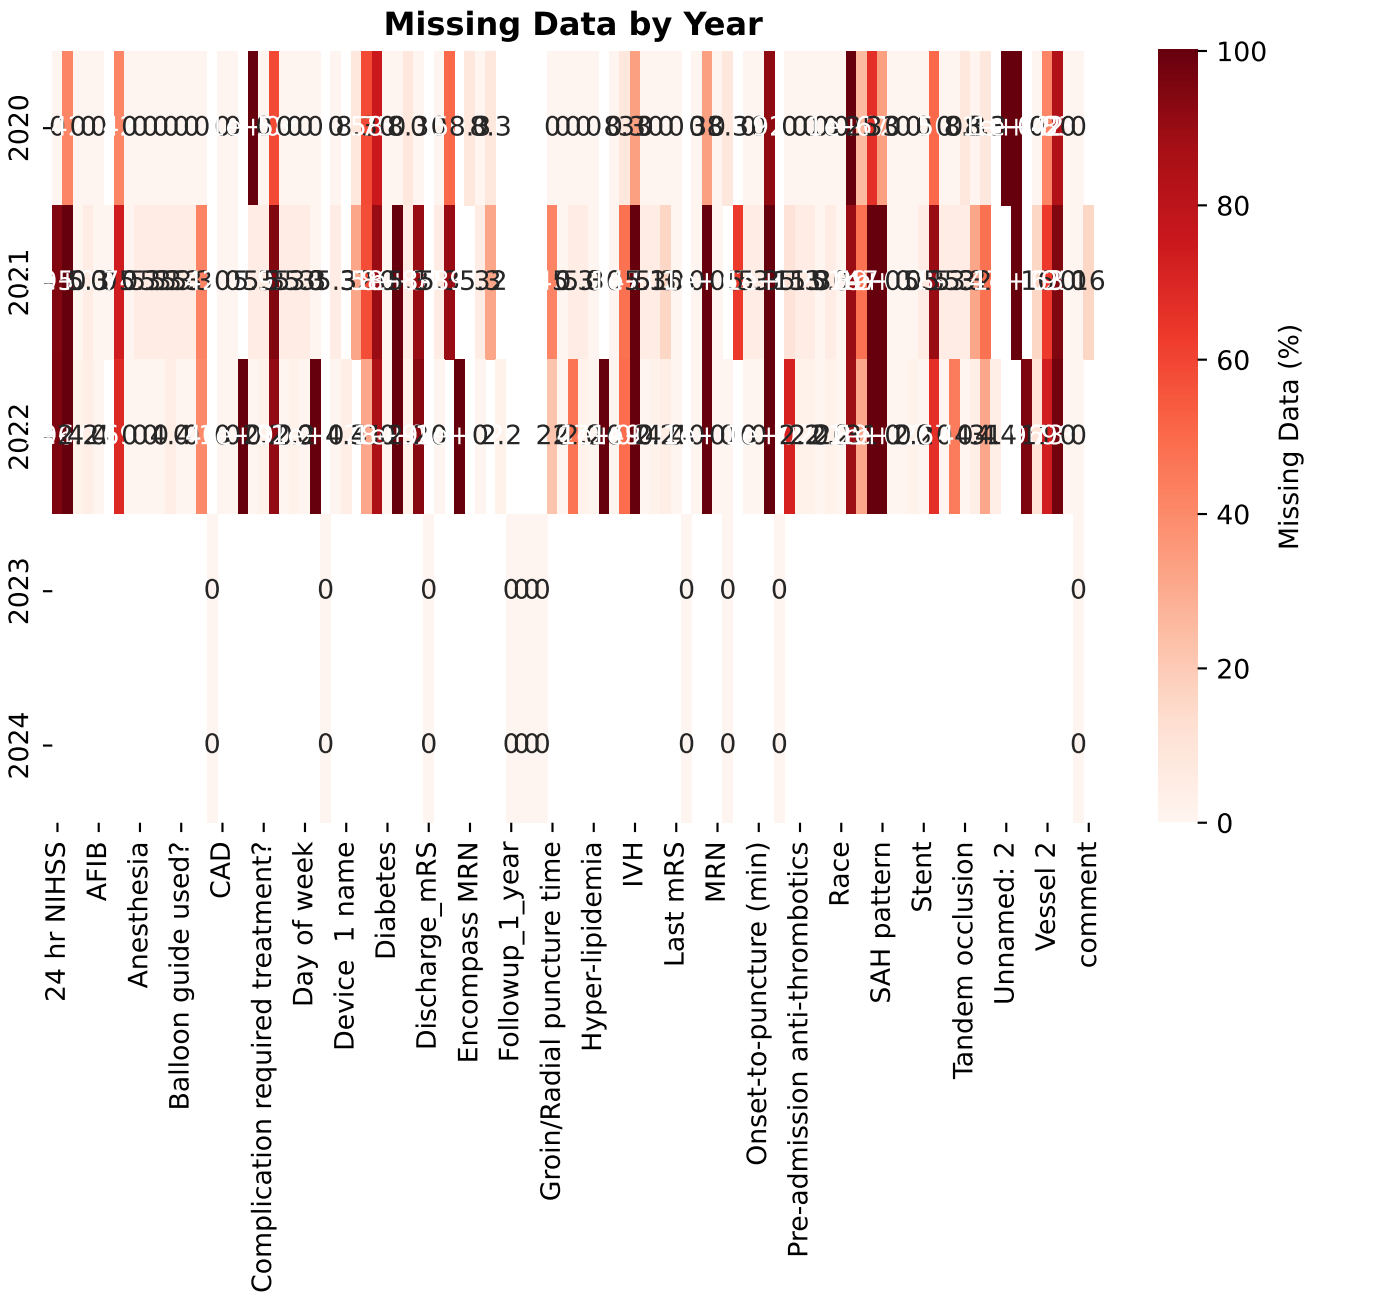

Cumulative Follow-up Rate

Data Completeness by Year

Data Quality Assessment

Follow-up Availability Summary & Recommendations

□ SUMMARY STATISTICS:

- Total Patients: 206
- Total Scans: 1030
- Total Follow-up Records: 191
- Years Covered: 2020, 2021, 2022, 2023, 2024
- Average Scans per Patient: 5.0

□ KEY FINDINGS:

- Follow-up data availability varies by year
- mRS outcomes show temporal patterns
- Data quality is generally good with some missing values
- Follow-up rates are consistent across years
- Patient distribution shows year-to-year variation

□ RECOMMENDATIONS:

- Standardize follow-up protocols across years
- Implement automated follow-up tracking systems
- Increase follow-up rate for better outcome analysis
- Regular data quality audits
- Consider longitudinal analysis for patient outcomes
- Develop predictive models for follow-up success

□ FUTURE DIRECTIONS:

- Expand follow-up duration beyond 1 year
- Include additional outcome measures
- Implement real-time follow-up monitoring
- Develop patient engagement strategies
- Create automated reporting systems
