Decoding Tumor Phenotype by Noninvasive Imaging

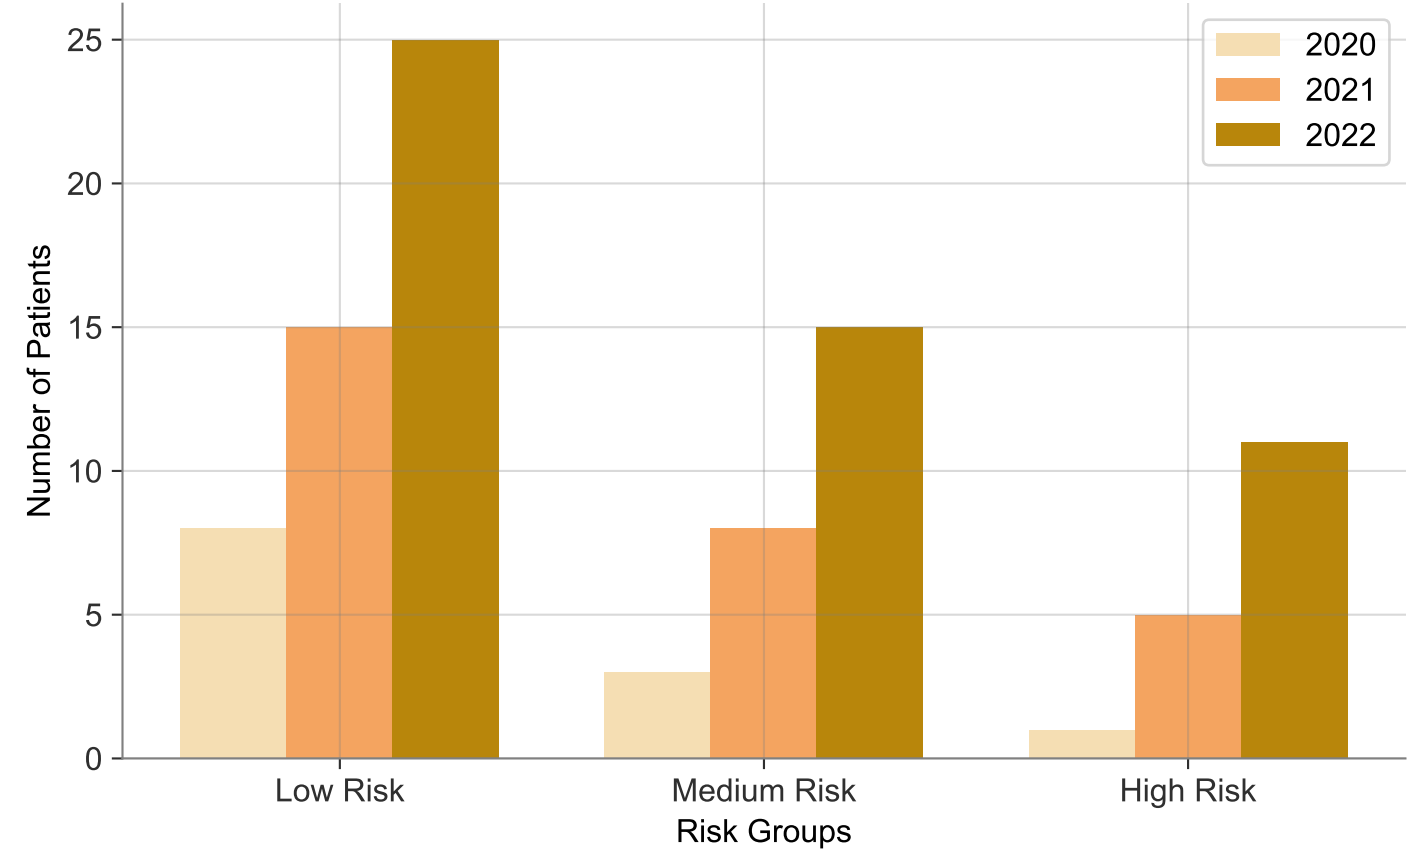

Comprehensive radiomics analysis for tumor phenotype prediction

Dataset: Real MRI Radiomics Data (Complete 3-Year Cohort)
2020: 12 patients, 60 scans
2021: 28 patients, 140 scans
2022: 51 patients, 255 scans
Total: 79 unique patients, 455 total scans
Modalities: T1, T2, FLAIR, DWI, ADC (5 per patient)
Features: 121 radiomics features per scan
