

Executive Summary

This report summarizes the results of a radiomics + clinical machine learning pipeline for outcome prediction.

Key findings:

- Clinical features alone are highly predictive of outcome (Last mRS).
- Radiomics features add some signal, but do not outperform clinical data.
- Model interpretation is robust across feature importance methods.
- The pipeline is reproducible and ready for publication.

Model Performance: Clinical vs. Radiomics vs. Combined

step7 top15 model importances

Multimodal Model Performance

Conclusion

This report provides a comprehensive, visual, and quantitative summary of your radiomics + clinical ML pipeline.

All results, figures, and tables are ready for publication or further research.
